

RETRO-PLATE

New flooring option meets your needs today...and in the future.

Retro Plate involves a process of grinding, polishing, chemical hardening and densification of structural concrete floors. Concrete polishing is a new wave in flooring which allows for the restoration of existing slabs and the improvement of new slabs that is superior to all other flooring. Retro Plate brings out the aesthetic beauty in natural concrete. It will transform your concrete floor into a beautiful, functional, low maintenance, high performance floor without the use of topical coatings. The Retro Plate process will also add durability, and lower floor maintenance expense for the following concrete finishes.

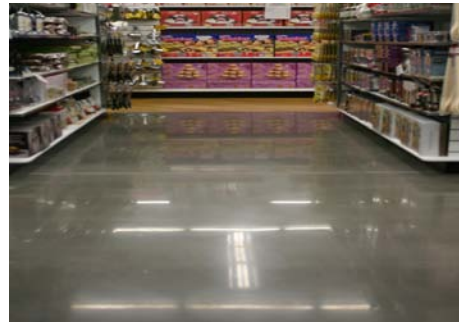

- Acid Stains & Dyes (New & Old Concrete)
- Integral (New Concrete)
- Quartz Colored Shake-On-Hardeners (New Concrete)
- Terri-Con (New Concrete)
- Cement Terrazzo (New & Old)

WHAT DOES RETRO PLATE LOOK LIKE?

Retro Plate is soft to the touch, smooth, dense and lustrous. It can be polished to a smooth glass-like finish, that actually appears wet or you can have a brilliant marble-like luster, matte or semi gloss finish. The Retro Plate process rehabilitates and enhances new and old floors. Many facilities and homes are using polished concrete as an alternative to marble, granite, tile, linoleum, or coated concrete. The Retro Plate process can be used anywhere there is concrete. Some of the more popular places are:

- Warehouses
- Car Dealerships
- Manufacturing Facilities
- Restaurants
- Retail
- Schools
- Offices
- Hospitals
- Heath Centers
- Markets

WHY POLISH CONCRETE?

Retro Plate transforms new or worn concrete into a decorative and aesthetically pleasing surface. It does this economically, while providing a permanent, long-lasting and low maintenance floor. Because Retro Plate is coating free it's never necessary to wax, coat, or strip the floor, which means no more peeling or flaking coating mess.

Other features and benefits include:

- Stain Resistant
- 400% More Abrasion Resistant
- Increases existing light up to 30%
- Eliminates Dusting
- A LEED Material for Sustainable Design
- 20% More Impact Resistant
- Not Effected by Ultraviolet Light

WHAT IS THE COST RETRO PLATE?

Retro Plate is less than the cost of other concrete coating systems! Although, that's not where the savings end, it's really the beginning. Concrete coatings can potentially fail due to delaminating, cracking, fading, staining, yellowing, and wear. The true value of a Retro Plate floor is measured by:

- Durability
- Beauty
- Long-term cost savings in maintenance

Retro Plate gives you permanent, long lasting results, which require no costly maintenance because there are no coatings.

HOW LONG WILL IT LAST?

The life expectancy of Retro Plate depends on its intended use and commitment to maintenance. One fact is for sure, it is going to last many, many years without the use of special cleaners, waxes or coatings.

MAINTENANCE REQUIREMENTS

It is virtually maintenance free. Retro Plate has the lowest cleaning per foot cost of any comparable flooring. Just dust mop, vacuum, or sweep loose debris and then wet mop or use an auto scrubber with an acid free cleaner.

WARRANTY

Retro Plate offers a (10) year written warranty; however, it will never peel, bubble or blister! The final appearance of the concrete will be determined by the original aggregates, material blends, and desired finish.
